PROBLEM STATEMENT

Movie enthusiasts currently face challenges in accessing consistent and trustworthy movie reviews. Existing platforms often present fragmented ratings and lack features for personalized tracking. This leads to difficulties in making informed viewing decisions and sharing individual opinions.

To address this, there's a need for a user-friendly platform that consolidates movie information, offers a streamlined rating system, and facilitates personal interaction through comments and tracking. The ideal solution should be lightweight, visually engaging, and accessible across various devices to enhance the movie-browsing experience

PROBLEM STATEMENT

IMPLICATIONS

- **Scalability:** As the user base grows, the application will need to scale to handle increased traffic and data storage.
- **Data Privacy:** Implementing user accounts and storing user data raises data privacy concerns. You'll need to comply with relevant privacy regulations and implement security measures to protect user information.
- **API Usage Limits:** Be mindful of API usage limits (e.g., the TMDb API) to avoid exceeding quotas and incurring costs.
- **Maintenance:** The application will require ongoing maintenance, including bug fixes, feature updates, and security patches.
- **Monetization:** Consider potential monetization strategies, such as displaying ads, offering premium features, or partnering with streaming services.
- **These are just some ideas to consider.** The specific features and enhancements you choose to implement will depend on the goals of the application, the target audience, and the available resources.

SYSTEM DEVELOPMENT APPROACH

Frontend Technologies

- HTML5 – Structure of the webpage
- CSS3 – Styling & responsive layouts
- JavaScript – Dynamic features (search, rating, comments)

Design Approach

- Clean, user-friendly interface
- Mobile-responsive design
- Modular separation of HTML, CSS, and JS

Data Source

TMDb API – Movie data, posters, cast, and crew

ALGORITHM & DEPLOYMENT

STEP BY STEP PROCEDURE

Search and Display: Users can search for movies, and the results are displayed in a card format with essential information.

User Interaction: Users can interact with the movies by rating them, adding comments, and expressing their preferences (like/dislike).

Data Persistence: User-generated content (ratings, comments) is saved using LocalStorage, meaning it will persist even if the user closes the browser and returns later.

Detailed View: Clicking on a movie card provides a more in-depth view, including cast, director, writer information, and a more comprehensive overview.

Navigation: The application provides easy navigation between the search results, the detailed movie view, and the home screen.

ALGORITHM & DEPLOYMENT

DEPLOYMENT

The deployment section indicates that the application can be hosted on GitHub Pages or Netlify, which are both free platforms, making it accessible to anyone with an internet connection. This suggests the application is designed to be easily shared and accessed.

Avatar

In the 22nd century, a paraplegic Marine is dispatched to the moon Pandora on a unique mission, but becomes torn between following orders and protecting an alien civilization.

Your Rating:

👍 12 👎 0

"The 3D effects make the movie more enjoyable."

"The action scenes are exciting."

"A classic sci-fi adventure that still wows years after release."

"The visuals in Avatar are absolutely breathtaking; the world of Pandora feels alive and immersive."

Directors: James Cameron

Writers: James Cameron

Cast:

Sam Worthington
Jake Sully

Zoe Saldana
Neytiri

Sigourney Weaver
Dr. Grace Augustine

Stephen Lang
Colonel Miles Quaritch

Michelle Rodriguez
Trudy Chacon

Giovanni Ribisi
Parker Selfridge

Joel David Moore
Norm Spellman

CCH Pounder
Mo'at

RESULT

- ★ Your Rating: Point to the stars and number of ratings
- 👍👎 Like/Dislike: Show interactions
- 💬 Comments Section: Highlight how users can add comments

CONCLUSION

- The system offers a single place for searching movies, reading ratings, and viewing reviews.
- It is designed to be easy to use and visually attractive.
- Ratings, comments, and likes are saved using LocalStorage, meaning the information is retained.
- The system aims to increase user engagement and help people make better movie choices.

FUTURE SCOPE

- Backend integration (Node.js) for user accounts & cross-device data.
- Cloud database to store ratings, comments, likes globally.
- Recommendation system based on user ratings.
- Social sharing and following features.
- AI-based movie suggestions.
